

**IN THE CLAIMS**

1. (currently amended) A method of identifying a presence of a first ~~material~~ fluid in an earth formation having a first transverse nuclear magnetic spin relaxation time  $T_2$  in a mixture with a second ~~material~~ fluid in an earth formation having a second transverse nuclear magnetic spin relaxation time  $T_2'$  greater than said first transverse relaxation time, said first material comprising a small fraction of the mixture, the method comprising:

(a) using a magnet to produce a static field in a region of examination in said earth formation and align nuclear spins in said region substantially parallel to a direction of said static field;

(b) applying a pulse sequence

A1 -  $\tau$  - B1  $\tau$  - A2 - TW - A3

where A1 is a first excitation pulse,  $\tau$  is a Carr-Purcell time, B1 is a first refocusing pulse, A2 is forced inversion pulse, A3 is a second excitation pulse, and TW is a wait time, and

(c) determining a value of TW for which a resulting signal from said second ~~material~~ fluid in said earth formation is substantially zero.

2. (previously presented) The method of claim 1 wherein said first excitation pulse comprises a pulse having a tip angle substantially equal to  $90^\circ$ .

3. (previously presented) The method of claim 1 wherein said second excitation pulse comprises a pulse having a tip angle substantially equal to  $90^\circ$ .

10/649,423

3

1 4. (previously presented) The method of claim 1 wherein said first refocusing pulse  
2 comprises a pulse having a tip angle substantially equal to  $180^\circ$ .

3

1 5. (previously presented) The method of claim 1 wherein determining said value of  
2 TW further comprises applying a sequence of refocusing pulses  $B_{2i}$  after said  
3 second excitation pulse and determining a value of TW for which substantially no  
4 spin echo signals are produced by said sequence of refocusing pulses.

5

1 6. (previously presented) The method of claim 5 wherein at least one of said  
2 sequence of refocusing pulses comprises a pulse with a tip angle substantially  
3 equal to  $180^\circ$ .

4

1 7. (previously presented) The method of claim 1 further selecting  $\tau$  to satisfy the  
2 condition

3 
$$T_2' \gg \tau \gg T_2.$$

4

1 8. (previously presented) The method of claim 5 further comprising:

2 (i) repeating (b) with different values of TW until no free induction decay  
3 signal after the second excitation pulse A3 is produced;

4 (ii) repeating (b) with a value of TW altered from the value determined in (i);  
5 and

6 (iii) analyzing a resulting free induction decay signal.

10/649,423

7

1 9. canceled

2

1 10. (previously presented) The method of claim 9 further comprising conveying said  
2 magnet on a logging tool into a borehole into said earth formation.

3

1 11. (previously presented) The method of claim 10 wherein said logging tool is  
2 conveyed on a wireline.

3

1 12. (previously presented) The method of claim 10 wherein said logging tool is  
2 conveyed on a drilling tubular.

3

1 13. (previously presented) A system for identifying a presence of first fluid having a  
2 first transverse nuclear spin relaxation time  $T_2$  in a mixture in an earth formation  
3 with a second fluid having a second transverse spin relaxation time  $T_2'$  greater  
4 than said first transverse relaxation time, said first fluid comprising a small  
5 fraction of the second fluid, the method comprising:

6 (a) a logging tool conveyed into a borehole into said earth formation,

7 (b) a magnet on said logging tool for producing a static field in a region of  
8 said earth formation including said mixture, said magnet aligning nuclear  
9 spins in said region substantially parallel to a direction of said static field;

10 (b) a transmitter on said logging tool for applying a radio frequency pulse  
11 sequence

10/649,423

12                   A1 -  $\tau$  - B1 -  $\tau$  - A2 - TW - A3  
13                   to said mixture in said region, where A1 is a first excitation pulse,  $\tau$  is a  
14                   Carr-Purcell time, B1 is a first refocusing pulse, A2 is forced inversion  
15                   pulse, and A3 is a second excitation pulse,  
16           (c)     a receiver on said logging tool for receiving signals resulting from said  
17                   nuclear spins resulting from application of said pulse sequence; and  
18           (d)     a processor for determining a value of TW for which a resulting signal  
19                   from said second fluid is substantially zero.

20

1       14.   (previously presented) The system of claim 13 wherein said first excitation pulse  
2                   comprises a pulse having a tip angle substantially equal to 90°.

3

1       15.   (previously presented) The system of claim 13 wherein said second excitation  
2                   pulse comprises a pulse having a tip angle substantially equal to 90°

3

1       16.   (previously presented) The system of claim 13 wherein determining said value of  
2                   TW further comprises applying a sequence of refocusing pulses B<sub>2i</sub> after said  
3                   second excitation pulse and determining a value of TW for which substantially no  
4                   spin echo signals are produced by said sequence of refocusing pulses

5

1       17.   (previously presented) The system of claim 13 wherein said first refocusing pulse  
2                   comprises a pulse having a tip angle substantially equal to 180°.

3

10/649,423

- 1 18. (previously presented) The system of claim 16 wherein at least one of said  
2 sequence of refocusing pulses comprises a pulse with a tip angle substantially  
3 equal to  $180^\circ$ .  
4
- 1 19. (previously presented) The system of claim 13 wherein  $T_2' \gg \tau \gg T_2$ .  
2
- 1 20. (previously presented) The system of claim 13 wherein said processor further  
2 performs:  
3 (i) a repetition of (b) in claim 13 with different values of TW until no free  
4 induction decay signal after the second excitation pulse A3 is produced;  
5 (ii) a repetition of (b) in claim 13 with the value of TW altered from the value  
6 determined in (i) ; and  
7 (iii) analyzes a resulting free induction decay signal.  
8
- 1 21. (previously presented) The system of claim 13 further comprising a wireline for  
2 conveying said logging tool into said borehole.  
3
- 1 22. (previously presented) The system of claim 13 further comprising a drilling  
2 tubular for conveying said logging tool into said borehole.  
3
- 1 23. (previously presented) The system of claim 13 wherein said processor is on said  
2 logging tool.
